Q: Cannot get batch output from AWS lambda I have a Lambda function that appends a new string to the end of a SQS queue. I am trying to execute the function via a Batch request, but I am not able to get any output from the function. The error I get is: Job did not complete within the maximum time allowed (2147483647 millis). I'm assuming that this is due to the SQS queue max size (which is 10,000 entries in my case). What I'm doing is:
`CronExpression cronExpression = CronExpression.parse("0 2 * * *"); BatchGetJobsRequest batchRequest = new BatchGetJobsRequest(); batchRequest.withJobs(Arrays.asList(configuration.getJobs())); BatchGetJobsResponse batchResponse = service.batchGetJobs(batchRequest); Logger.log("BATCH ID:" + batchResponse.getJobs().getJobIds()[0].toString());` Thanks for any help! A: Ok, I found the answer to my own question. The reason the batch get job did not get any output was due to the SQS max size. To fix this, I simply added a retry configuration to the queue: "Retries": 1, "DelaySeconds": 20, "DelayInterval": "PT10S", "BackoffLimit": 2, "JitterSeconds": 0.0 I'm still unclear as to why the script running on the server did not get any output while the batch request worked, but that's a whole other question, so I'll leave it for now. But you can follow along easily enough in Photoshop CS3. If you don't have Photoshop CS4, you'll have to step through all of the steps with a little more care, but they're not too difficult. STEP 1 Create a photo to work from. Start by creating a new document of the size you wish to work. I'll use 2200 pixels for my photo. Click the Create a new document button on the very top right of the screen. In the fill box that comes up type 2200 in the width and height boxes. You could also make your photo about 300 pixels wide. It's not a problem if it's a little off at first. Click OK. Your new Photoshop document should now be open. Right now we're just going to work on your document, so click OK. This is an important step before starting to apply any brushes in Photoshop. Click the Image menu on the top left of the screen. Make sure the Resize Image Down option is not selected. Click the Image menu again. Click the Open dialog box. Go to find the folder where your picture was saved in. Find the picture you want to work with. Click Open. If you click Edit and want to change the size of the photo, this works too. Click OK. STEP 2 Create a few brushes. Right now let's make a few brushes. For this I'll use a photo of a lamp. This will give us a few things to play with, like opacity, blending
